The current balance of payments yearbook provides an overview of the 2002 developments in the external sector through the reports on Estonia's balance of payments, international investment position and external debt. The 2002 balance of payments is the eleventh to be drawn up since Estonia restored its independence, but the balance of payments yearbook is the third to be published.

Similar to most other countries in continental Europe, the national central bank, Eesti Pank in Estonia, is responsible for drawing up the balance of payments. In Eesti Pank the compilation of the balance of payments, as a statutory basic function of the central bank, is the responsibility of the Balance of Payments and Economic Statistics Department (until 2003 Statistics Department). The Department works on the balance of payments central concept, with most work procedures of the Department and underlying legal base stemming from it.

Balance of payments is one of the most important economic indicators, which reflects the strength of the country's international economic position and forms the base for making monetary and economic policy decisions and assessing risks. This is why it is crucial for the balance of payments of a country to be of high quality and in compliance with all international requirements. While compiling the balance of payments, following the criteria for joining the EU has gradually become more of a burning issue. As far as these criteria are concerned, Estonia is among the top of the acceding countries.

Collecting the statistical data of the external sector, Eesti Pank is in extensive cooperation with more than 3,500 companies engaged in external economic activities as well as with credit and national institutions, all reporting their statistics regularly. This is their share in the compilation of Estonia's balance of payments. We thank all our partners for fruitful cooperation!

I. BALANCE OF PAYMENTS AND INTERNATIONAL INVESTMENT POSITION

Theoretical Concept, Methodology and Compilation Practices

The IMF Balance of Payments Manual, 5th Edition serves as a methodological base for the external sector statistics as well as for the Estonian model of the balance of payments statistics. The following is an introduction to three basic documents (balance of payments, international investment position and external debt), their contents, definitions, nature of basic data, dissemination standard and compilation practices.

BALANCE OF PAYMENTS

The balance of payments is by nature the consolidated income statement as well as the consolidated balance sheet of all the economic sectors of the state. Company's financial statements reflect the relations of a sole proprietor with the external environment. Theoretically the balance of payments has the same function, the company being the national economy in its entirety and its environment – the rest of the world.

The balance of payments is a statistical statement that systematically summarises, for a specific time period, the economic transactions of a country with the rest of the world. The period is usually a month, a quarter or a year.

Since the balance of payments reflects transactions during a specific time period, the values of the balance of payments entries are *flow indicators*.

The balance of payments includes *current account*, reflecting income from the external economic activity and *capital account*, *financial account* and *reserves*, reflecting current account financing, ie the structure of *external financing*.

The current account includes four major parts¹: *goods*, *services*, *income* and *transfers*. Goods and services balances include all purchased and sold goods and services. The income balance reflects income associated with the use and render for use of capital and labour. Transfers are all remaining transactions that are linked to the level of disposable income of residents and are distinguishable from capital transfers.

Financial sources are divided between three accounts: *capital account*, *financial account* and *reserves account*. The capital account records mainly transactions with intangibles (eg acquisition/disposal of intellectual assets), debt forgiveness and other international capital transfers not linked to disposable income. The financial account

¹ See Definitions, and Entries, pages 8–13.

records foreign investments, classified into four major categories: *direct investment*, *portfolio investment*, *financial derivatives* and *other investment*. In Estonia *reserves account* reflects changes in the gold and foreign currency reserves of the central bank.

The compilation of the balance of payments is not based on the territory of the compiling state. A balance of payments transaction is for the most part a transaction (not only movement of money) between a *resident* and a *non-resident*. The balance of payments is compiled on an *accrual basis*, meaning that the transaction is recorded at the time the transaction was concluded between parties or a change of ownership took place, irrespective of whether money has actually been received or paid at that particular time. All balance of payments transactions are recorded in *market prices*.

The *double entry system* serves as the underlying principle in compiling the balance of payments. Every recorded transaction is represented by two entries with equal values, but with different arithmetic signs: *credit* (+) and *debit* (-). Credit reflects an increase in the financial resources available and debit reflects their utilisation (see Table 1.1).

Table 1.1. Credit and debit

	Increase of resources	Decrease of resources
	CREDIT +	DEBIT -
Current account	Export of goods	Import of goods
	Export of services	Import of services
	Income inflow to Estonia	Income outflow from Estonia
	Transfers inflow to Estonia	Transfers outflow from Estonia
Capital account	Inflow of capital transfers	Outflow of capital transfers
Financial account	Decrease of external claims	Increase of external claims
	Increase of external liabilities	Decrease of external liabilities
Reserves	Decrease of reserves	Increase of reserves

In the ideal case the net balance of all entries in the statement is zero. The complicity and scope of the balance of payments make the collection of statistics always inaccurate. In order to balance the accounts, the inaccuracy is reflected under the entry *errors and omissions*.

Under Special Data Dissemination Standard current account and capital account record debit and credit turnovers separately. Only *net entries* (sums of debit and credit entries) are recorded on the financial account and reserves account.

INTERNATIONAL INVESTMENT POSITION

International investment position is a consolidated balance sheet of all the financial assets and financial liabilities of all sectors of economy of a country as of the balance sheet date in market prices.

Since accounts are fully consolidated, the financial assets and liabilities of domestic sectors will cancel each other and the international investment position refers to the stock of *external claims* and *external liabilities* of a nation as a whole. The investment position differs from the classical balance sheet in not considering resident-owned real assets and equity in Estonia. Therefore the investment position is not balanced.

The net investment position is the difference between the external assets and external liabilities of all sectors of economy of a country.

The net investment position is *positive* when external assets exceed external liabilities, reflecting the net debt of the rest of the world to the country. The *negative* net investment position reflects the debt of the country to the rest of the world.

It has been agreed upon to record claims and liabilities between the direct investment enterprise and the direct investor on a *directional principle*:

- all direct investment enterprise's claims to direct investors are deducted from direct investments in Estonia (liabilities);
- all Estonian direct investors' liabilities to direct investment enterprises abroad are deducted from direct investments from Estonia (claims).

The same concepts and definitions as in the balance of payments are used when compiling the investment position. The basic principles are *accounting on an accrual basis* and valuation in *market prices* of the day of compiling the position.

As international investment position reflects assets and resources at a certain date, the values of investment position entries are *stock indicators*.

EXTERNAL DEBT

External debt statistics is based on external claims and liabilities, recorded in the international investment position, which are debts in their nature, meaning that they have to be repaid. Direct and portfolio investments into share capital as well as reinvested earnings (undistributed profit/loss of previous periods and reserves of equity capital) are excluded from debt accounting. In addition, neither gold reserves of the central bank nor special drawing rights (SDRs) belong to external debt².

Major external debt indicators are:

- **gross external debt – the amount of all external debt liabilities of all economic sectors;**
- **net external debt – the difference between external debt claims and liabilities repayable by all economic sectors.**

Unlike international investment position that reflects direct investments *on a directional principle*, loans granted by resident direct investment enterprises to direct investors do not reduce direct investment liabilities as they are entered under the liabilities' side of the balance sheet in debt accounting. Estonian residents' loans from non-resident direct investment enterprises are not subtracted from Estonia's direct investment claims abroad either but are added to debt liabilities instead.

Similar to international net investment position, indicators reflecting external debt are *stock indicators*.

DEFINITIONS

- **Resident:**
 - 1) state bodies and agencies of the Republic of Estonia in the broadest sense (legislative, executive and judicial power and their agencies, constitutional institutions) as well as local governments and their agencies;

² See Entries, Reserves, p 13.

- 2) Estonia's diplomatic, consular and other official representative offices abroad as well as other representative offices of Estonian agencies and organisations abroad not involved in economic or commercial activities;
 - 3) public legal persons and their agencies established by the laws of the Republic of Estonia;
 - 4) private legal persons registered in Estonia;
 - 5) associations of individuals and organisations with partial legal competence who are not legal persons but are established in Estonia, operate in Estonia and are permitted by Estonian legal order;
 - 6) branches and affiliates of foreign legal persons registered in Estonia;
 - 7) natural persons:
 - a) Estonian citizens residing in Estonia;
 - b) foreigners residing in Estonia with permanent resident permits;
 - c) foreigners residing in Estonia with a residence permit for at least a year;
 - d) persons listed under a) – c) studying or getting medical treatment abroad regardless of the length of studies or medical treatment;
 - e) diplomats, the military, staff of consular and other official representative offices living abroad and enjoying immunity and diplomatic privileges as well as their family members.
- **Non-resident:** all other persons not covered by the definition 'resident'.
 - **Sectors of economy** are divided into the following groups for the external sector statistics:
 - *government sector* – state governance and defence institutions under the area of governance of central and local governments; central and local government-financed science, research, health, social welfare, education, culture and sports institutions and state-administered funds and foundations;
 - *monetary institutions* – Eesti Pank as the national central bank;
 - *credit institutions* – commercial banks licensed by Eesti Pank as private legal persons authorised to receive cash deposits and other repayable funds from the public and to grant loans for its own account and conduct other transactions listed in the Credit Institutions Act;
 - *other sectors* – the remaining private sector (enterprises and households).
 - **F.o.b. price** – an international delivery clause, including the value of goods plus the cost of insurance and transportation to the customs frontier of the exporting country.
 - **C.i.f. price** – an international delivery clause, including the value of the goods plus the cost of insurance and transportation to the customs frontier of the importing country.
 - **Long-term capital** – claims or liabilities with a maturity of more than one year.
 - **Short-term capital** – claims or liabilities with a maturity up to one year (inclusive).
 - **Short-term position** – net investment position based on short-term external claims and liabilities. Conventionally reserves of the central bank are considered short-term due to the nature of these assets.
 - **Long-term position** – net investment position based on long-term external claims and liabilities. Conventionally direct investments are considered long-term due to the nature of these investments.
 - **Capital lease** – loan for acquisition of assets on condition that the leased property remains in the ownership of the lessor until the amortisation of the loan and interests.
 - **Repurchase agreement** – borrowing against securities as collateral.

ENTRIES

- **Trade balance** – includes import and export of goods that contributes to gross domestic product (GDP):
 - import for national consumption – residents-paid goods imported for free circulation;
 - national export – export, the sale of which provides receipt to residents;
 - import and export of goods for processing.

Estonia's trade balance is based on the *special trade system* of official trade statistics, registering goods exceeding free circulation³. Export does not contain the re-export of imported goods previously stored in customs warehouses or goods for provisioning sea vessels and aircraft. Import does not contain customs warehousing of imported goods, but reflects deliveries of goods from customs warehouses into free circulation and processing. As the official trade statistics and customs statistics do not comply with the balance of payments compilation principles (import in c.i.f. prices, residency principle vs territorial principle, etc), necessary supplement is provided to the balance of payments. The most significant of them are:

- a) goods not declared in customs and not crossing frontiers but which are balance of payments transactions (eg fish caught in external waters);
 - b) goods procured by carriers abroad: fuel, provisions, goods for sale, etc;
 - c) repair on intermediate goods purchased and sold;
 - d) translation of imports into f.o.b. price, ie separation of transportation and insurance costs;
 - e) consideration of price distortions while exporting goods via customs warehouses and free trade zones;
 - f) estimates of black economy.
- **Balance of services** reflects services sold to and purchased from non-residents by Estonian residents:
 - *transport services* – includes passenger, freight and other transportation by significant modes of transport (marine, air and other transport modes);
 - *travel services* – includes expenditure on package travels of tourists and one-day visitors, as well as on goods and services in the country of destination. Travel services also include education and medical treatment in the country of destination. As a rule tourism includes staying abroad for less than one year, nevertheless, there is no time limit for students and medical patients. Tourism differs from travel services for according to the international best practice, international passenger services as tourism services are included under transport in the balance of payments;
 - *communication services* – comprise charges for telecommunication (TV and radio transmission, telegraph, telex and facsimile communication, satellite and cable television, e-mail, etc), postal and courier (packaging, mailing, transportation, delivery of items, lease of letter boxes etc) services;
 - *construction services* – cover the cost of construction activity abroad by resident enterprises or of construction activity in Estonia by non-residents. Construction services, as a rule, include sites or installation to be completed within one year, longer projects are treated as direct investments;
 - *insurance services* – charges collected and paid upon conclusion of life and non-life insurance contracts, claims expenses, insurance surveys, etc. For non-life insurance, total premiums and claims payable should be recorded under current transfers. For life insurance, premiums and claims payable should be recorded in the financial account under other long-term capital;

³ *General trade system* is also used, registering the movement of goods across the customs border. This is unsuitable for the balance of payments' purposes as it registers also the movement of non-residents' goods through Estonian customs warehouses.

- *financial services* – cover financial intermediation services and auxiliary services (other than insurance) related to commissions and fees of banking and securities brokerage or to asset management, clearing, depository services, financial consulting, etc;
 - *computer and information services* – cover transactions related to fees for the use and development of databases, data processing and programming, hardware consultation, software implementation, etc; as well as services by news agencies;
 - *royalties and license fees* – receipts and payments for the use of copyrights, licenses, franchises, patents, industrial processes or other intellectual property;
 - *business and trade-related services* – commissions and service fees of commodity brokers and dealers. The value of trade-related services is the difference between the value of goods acquired by residents abroad and the value when resold abroad during the same period. The goods must never enter the customs territory of the compiling state;
 - *operating lease* – payments where the lessee uses the assets during the contract period and returns the assets to the lessor upon the expiry of the contract. (*Capital lease* – see p 9);
 - *miscellaneous business services* – services related to consulting (legal assistance, accounting, audit, management consulting, etc), public relations and marketing (advertising, opinion polls and market research, etc) or other technical services (waste management, environmental protection, architectural and engineering services, printing services, etc);
 - *cultural and recreational services* – audio-visual services related to radio, television and production of motion pictures, organising concerts and other events, fees to performers, organising exhibitions and museum exhibits, producer services and other sporting, cultural and recreational services;
 - *government services not included elsewhere* – a residual category covering government service transactions related to embassies and consular services, military and other public sector services, state fees and foreign aid received and provided as a service (for foreign aid see also *current transfers*).
- **Income balance** reflects income related to the use and render for use of capital and labour. Income falls into two categories:
 - a) *compensation of employees* – comprising net income of individuals (disbursed and received wages, salaries and benefits without taxes);
 - b) *investment income* – covering income (interests, dividends and other owner's income, etc) receivable and payable from foreign investment (direct, portfolio and other investments). Investment income includes *reinvested earnings*, being a proportional change equal to investment in the undistributed profit of the investment enterprise.

Accounting income from realised and unrealised exchange rate and price differentials are not recorded as income, because the balance of payments records movement of financial instruments in market price. For accounting purposes the latter comprises acquisition cost and realised exchange rate and/or price profit/loss.

- **Current transfers** are all remaining transactions related to the accumulation of residents' disposable income but not recorded elsewhere under the current account. Current transfer is unilateral, there is no consignment or service following (or preceding) the transfer, it is neither income for the use of production factors. Current transfers are usually related to state taxes, fines, subsidies, donations, inheritance, membership fees, insurance premiums and indemnities. Current transfers have also cost of services and goods received or provided as foreign aid as offsetting entries. Current transfers account handles money flows in two categories:
 - a) *general government transfers*;
 - b) *private transfers*.

General government transfers are the amounts related to transfers received and disbursed by Estonia's public sector. *Workers' remittance* under private transfers records expenditure by non-resident workers in the country of work.

- **Capital transfers** are similarly to current accounts unilateral, but amounts received or paid have no direct impact on residents' gross disposable income. Major capital transfers include:
 - a) grants from international funds to finance infrastructure objects;
 - b) transfers of migrants;
 - c) acquisition and disposal of non-produced, non-financial intangible assets (intellectual property – franchise, patents, trademarks, processes, etc);
 - d) debt forgiveness or write-off.

Capital account handles money flows in two categories:

- a) *general government transfers*;
- b) *capital transfers of other sectors*.

- **Direct investments** in Estonia's balance of payments are investments involving a majority holding, which amounts to 10 per cent or more of the share capital or voting power of the investment enterprise⁴. According to international standards, lending and other investments between the enterprise and the investor having a majority holding are also reflected as direct investments.
 - *Direct investment enterprise* – an enterprise in which an investor, ie a direct investor, holds a majority holding.
 - *Direct investor* – an investor having a majority holding in a direct investment enterprise.

Direct investment account falls into the following categories:

- a) *equity* – share capital of direct investment enterprises;
- b) *reinvested earnings* – the direct investor's share in proportion to direct equity participation (retained earnings, net reserve capital) and in reserve requirement;
- c) *other direct investment capital* – claims and liabilities related to lending, debt securities and commercial credit between a direct investment enterprise and a direct investor.

As pursuant to the Commercial Code the acquisition of own shares or mutual acquisition of shares between direct investors and direct investment companies is not generally permitted, the above cases (reverse investments) mainly concern other direct investment capital.

- **Portfolio investments** record under claims and liabilities securities investments that fall into the following categories:
 - a) *equity securities* denote ownership of equity not comprising a majority holding, ie remaining below 10 per cent of the share capital of the enterprise;
 - b) *debt securities* cover bonds and money market instruments:
 - i. *bonds and notes* are securities providing the holder with the unconditional right to a repayment of principal on a specified date as well as interests by the debtor. Bonds and notes are usually long-term instruments;
 - ii. *money market instruments* are treasury bills, certificates of deposit, commercial papers or other short-term securities, usually traded at a discount (the issuer pays the par value as a principal to the investor upon maturity and the difference between the issue price and price at maturity is treated as interest). As a rule, money market instruments are short-term instruments.

Portfolio investments are recorded by economic sectors in the balance of payments.

- **Financial derivatives** are securities whose value is based on the performance of an underlying financial instrument, index or commodity allowing to trade with financial risks at markets. Major financial derivatives are *options*, *forwards*, *futures* and *swaps*. In the balance of payments, derivatives are recorded by economic sectors, assets and liabilities separately.

⁴ The concept describes direct investments as placement of money leading to investor's majority holding and casting vote in managing the investment enterprise, regardless the actual holding. As such an approach does not ensure similar treatment of the investment in the investor and recipient countries, the ten-percent criterion is recommended to avoid statistical errors (*OECD Benchmark Definition of Foreign Direct Investment*, 1996).

- **Other investments** is a residual category including all investments that are neither direct investments and portfolio investments nor related to financial derivatives:
 - *trade credit* – uncollected or unpaid amounts for goods and services sold and advances, recorded on an accrual basis both in the balance of payments and international investment position;
 - *loans* – long- and short-term lending between sectors of economy, not related to direct investments. Loans also cover *capital lease* and *repurchase agreements*;
 - *cash and deposits* – foreign currency held by residents and their deposits in non-resident credit institutions are recorded as assets. Estonian kroons held by non-residents and their deposits in resident credit institutions are recorded as liabilities;
 - *other assets and liabilities* – accounts receivable and accounts payable recorded on an accrual basis, also other assets and liabilities unrelated to other entries. Life insurance premiums collected and disbursements made by insurance companies are recorded here as well.

- **Reserves** include the gold and foreign currency reserves of the central bank comprising the kroon cover in Estonia's monetary system. Reserve assets are usually highly liquid tradable external assets of the central bank, entered as:
 - a) *monetary gold* – gold held as a reserve asset;
 - b) *special drawing rights* – a unit of account created by the International Monetary Fund. Its value is based on a basket of four currencies (USD, EUR, JPY and GBP). Each IMF member state has a SDR account for borrowing and other related operations between the member state and the IMF;
 - c) *foreign currency* – foreign currency or equal reserve assets: foreign currency cash and deposits, equity securities, bonds and money market instruments and financial derivatives;
 - d) *other claims* – other liquid foreign assets.

BALANCE OF PAYMENTS COMPILATION SYSTEM

Three very different systems and their combinations are used in the world for the compilation of balance of payments:

- **survey system (transaction-based system);**
- **international transactions reporting system (ITRS; settlements system);**
- **administrative system;**
- **dual system.**

The survey system draws upon information from various statistical surveys and studies. Both sampling and surveys are used depending on the requirements, field of study and specificity of the compiling country. The structure of the questionnaire follows either the balance of payments structure or structure of financial statements and accounting principles. The advantage of the survey system lies in its flexibility, but statistical surveys are expensive to conduct, they have a low response rate and are not very operational. Anglo-American countries like Australia, New Zealand, Great Britain, Ireland, the USA and Canada are among successful users of the survey system.

The international transactions reporting system (ITRS) is based on collection, coding and processing of international payments through resident banks. Based on the description of the transaction, clients, commercial institutions or the central bank attribute each incoming or outgoing payment a transaction code in compliance with the balance of payments structure. The ITRS allows collecting detailed and operational information, but it is still limited: money flows do not reflect accrual approach, the description of a transaction or balance of

payments code is often missing, netting appears and money flows do not allow to estimate positions. The ITRS is used in the majority of countries in continental Europe.

The administrative system draws information from the data collected beforehand by various agencies. The use of this system presumes full control of the public sector over external transactions. There are few countries using only administrative information for the balance of payments whereas almost all countries use it to a larger or smaller extent. The major shortcoming of the administrative system lies in the weak data quality control.

COMPILATION PRACTICES IN ESTONIA

Estonia was the first among former Soviet Union countries to start compiling the balance of payments in 1992. Due to the weakness of the banking system at that time, the survey system was introduced. However, as this system is not flexible enough in the changing economic environment, possibilities to apply the ITRS instead were studied. The new system was launched parallel to the survey system in 1994. Later, when the compilation of international investment position started, surveys became more significant. Surveys facilitate collecting information on an accrual basis together with other indicators not reflected in money flows (for example trade credit, reinvested earnings).

Today Estonia has developed *its own compiling system – a dual one*, which has no direct model abroad. Two parallel databases are complimentary and simplify error identification. The databases in combination with administrative information provide the documents (balance of payments, international investment position, etc) with better quality, the latter usually being quite complicated in very open economies of low concentration. The smallness of Estonia is a major advantage here. The Scheme on page 15 describes Estonia's balance of payments compilation.

The survey system supplemented with ITRS information is significant for other quarterly statistics on the balance of payments and the external sector. For monthly balance of payments, money flows-based information supplemented with various econometric models is irreplaceable in its operational speed. In order to meet European Union requirements, Eesti Pank started to release monthly balance of payment indicators in 2002.

Currently, ten different surveys are in use, collecting quarterly information from more than 3,500 enterprises. The quarterly settlements system involves approximately 80,000 transactions significant for the compilation of the balance of payments, the information of which is received through the so-called *open system*: the central bank gets information only on the debit or credit side of the foreign payment order. Only payments of bank customers are transferred. Banking sector transactions entered in the balance of payments are based on banks' balance sheets, income statements and other financial statements.

Apart from the above, information is obtained from other channels as well: official trade statistics, Central Register for Securities, surveys conducted by Statistical Office of Estonia, Central Business Register, accounting registers in Eesti Pank, public sector institutions, etc. In addition, statistical surveys are conducted, assessments made and econometric methods applied.

Besides Estonia, several other central banks (including the central banks of Latvia, Lithuania, Sweden, Czech Republic) have preferred the dual system (cash flows combined with surveys). With the recent EU approval this model has also been gaining popularity in other European countries that until now have been obtaining information only from the cash-based system, established under tight capital control.

ESTONIAN BALANCE OF PAYMENTS COMPILATION SYSTEM

LEGAL BASE FOR BALANCE OF PAYMENTS

In accordance with Section 2 Subsection 8 of the **Bank of Estonia Act**, Eesti Pank is responsible for compiling the Balance of Payments of the Republic of Estonia, the compilation being one of the basic functions of the central bank.

Section 34 of this Act on drawing up of the balance of payments entitles Eesti Pank to obtain, free of charge, all data necessary for compiling the Balance of Payments of the Republic of Estonia from any state or local government entity or from any other legal entity engaged in foreign economic transactions and located on the territory of the Republic of Estonia.

Apart from the Bank of Estonia Act, the **Official Statistics Act** provides for the compilation of the balance of payments as well. Pursuant to Section 4 Subsection 2 of the Act, Eesti Pank is the other main agency conducting official statistical surveys besides the Statistical Office. Eesti Pank and the respondents are to follow all provisions of the Official Statistics Act on the conduct of statistical surveys, obligation to submit data, data protection, data dissemination and responsibilities of the parties.

Several decrees of the Governor of Eesti Pank also regulate the balance of payments reporting of Estonian credit institutions.

CONFIDENTIALITY OF DATA

Pursuant to the existing legal order, Eesti Pank ensures full organisational, IT and physical protection of single data of all balance of payments transactions. All data is used for statistical purposes only and disseminated in aggregate form without identifiable features.

DISSEMINATION AND ADJUSTMENT POLICY

Special Data Dissemination Standard (SDDS) is the basis for disseminating statistical data. Estonia joined the SDDS in October 1998. In statistics, the Standard sets minimum requirements for data coverage, dissemination periodicity and timeliness.

- **Data dissemination.** Balance of payments statistics together with press releases, analyses and statistical tables for the years 2003 and 2004 will be released on Eesti Pank's web site (<http://www.bankofestonia.info>) at noon on the dates specified in Table 1.2.
- **Adjustment policy.** Upon collection of additional information and changes in methodology, the data of previous periods is adjusted as follows:
 - a) *regular adjustment* – the data released on dates as provided in Table 1.2 is preliminary and is revised upon the release of the preliminary statistics of the next period. Adjusted annual data is published, as a rule, upon the release of the statistics of the first quarter of the following year and is considered final;
 - b) *extraordinary adjustment* – in exceptional cases, when significant errors and omissions have occurred or methodology changes render results incomparably, data can be adjusted retrospectively for more than a year, of which the public will be notified.
- **Unit of account and conversion.** The unit of account for the balance of payments and international investment position is the Estonian kroon (EEK). Statistics released in other currencies (eg USD) is based on the following conversion:

- *monthly balance of payments* – the monthly average exchange rate of the currency against the Estonian kroon;
- *quarterly balance of payments* – the quarterly average exchange rate of the currency against the Estonian kroon;
- *annual balance of payments* – average exchange rates of four quarters (ie the annual balance is the sum of quarterly balances converted into foreign currency);
- *international investment position* – the exchange rate on the date of compilation of the position or on the closest banking day before the date.

II. ESTONIAN BALANCE OF PAYMENTS FOR 2002

Even though the growth of the world economy accelerated in 2002 year-on-year, the economic growth in the EU and the euro area was slower than expected, reaching 1.6% and 1.0%, respectively. Although the weighted average economic growth of Estonia's major trade partners remained almost unchanged against 2001, being still a lot quicker than that of the European Union, the external demand of 2002 might be considered weak.

The economic growth of Estonia reached 6% in 2002, being almost 5 percentage points higher than the EU average. In contrast to previous years the relatively rapid growth was due to strong domestic demand and higher loan activity of the private sector. Investments increased by 17.5% in constant prices year-on-year and amounted to about 30% of the GDP. Increased investment demand was mostly caused by long-term projects, the implementation volume and speed of which do not depend on the present state of the economy. The single capital investments to technical infrastructure and export sector were evaluated to amount to 3,5–4,0% of the annual GDP. In principle, these investment plans rely on the assumption of increasing export in distant future.

The year 2002 was also exceptional, because in the conditions of increased investment demand, supply-side restrictions made the companies to import more transport and construction services, which caused the role of the services sector as the balancing mechanism for the trade balance deficit to become less important than before.

Investments were covered by external resources to a greater extent than in previous years, therefore the current account deficit, expressed as a ratio of the GDP, increased from 6.1% in 2001 to 12.3% in 2002 (see Table 2.1). In addition to the growth of investment activity, the decline in the level of savings also caused the need to use external resources and the increase of the current account deficit. The savings of households decreased most considerably, resulting in the deterioration of private persons' net position against the financial sector. Because of low loan interests, the private consumption increased by 8.2% year-on-year and the loans and leasing of private persons were up by 46.5%.

To some extent, government and business sector could offset the decline in private saving. Budget surplus was achieved two years running (the surplus in 2001 was 0.4% and in 2002 1.2% of the GDP) thanks to an expanded tax base and better tax administration and collection, all resulting from the growth in private consumption.

Weak external demand was most pronounced in the deterioration of Estonia's terms of trade (export price index fell 0.6%) and the recession in subcontracting industry. Subcontracting export volume in current prices was 22% smaller year-on-year. At the same time, increase in the volume of normal export continued at the same speed as in 2001, reaching 11%. There was substantial growth especially in the export of timber and timber products.

In 2002, a change in the structure of the domestic financing cover took place. Although the ratio of direct investment inflow to Estonia almost maintained the level of previous years, it did not cover the needs for financing increased investments. The current account deficit was more and more financed from accumulated reserves and foreign loans. Like in 2001, Estonia's external debt, expressed as a ratio of the GDP, increased (2.1 and 5.9 percentage points, respectively) and reached 65% of the GDP by the end of 2002. During 2002, the net external debt increased to 12% of the GDP. The budget surplus of the government sector and the means deposited abroad balanced the deterioration of the net position of the private sector to some extent.

Large capital inflow did not deteriorate the intrinsic balance of the economy. In 2002, the growth of consumer prices remained substantially lower than expected, reaching just 3.6%. The increase of prices in the sheltered sector reached 7%, but consumer prices were most influenced by food price decline in Europe. Therefore, food price increase amounted to just 2.7% in Estonia in 2002 (6.6% in 2001), lowering the inflation due to their large share in the consumer basket. Balanced development continued in the labour market as well, where wages increased in the same pace with productivity and labour costs per unit of production decreased.

Since investment demand probably remains high in the near future as well, the external balance may change quickly only due to increased savings of private persons and the acceleration of export growth.

Table 2.1. Internationally comparable general indicators of the balance of payments

	1995	1996	1997	1998	1999	2000	2001	2002

CURRENT ACCOUNT

Due to the weak export demand and strong import demand, the current account deficit of Estonia's 2002 balance of payments more than doubled year-on-year, both in absolute terms as well as in relation to the GDP, amounting to 13.2 billion kroons and 12.3%, respectively (see Figure 2.1).

The sudden increase of the deficit resulted from the growth of the foreign trade deficit and the decrease of the surplus of the services balance (see Figure 2.2). The current account deficit was fully covered by the surplus of the capital and financial account. The rapid growth of the outflow of income of the previous years slowed down in 2002 and the earnings coming to Estonia from direct investments abroad increased.

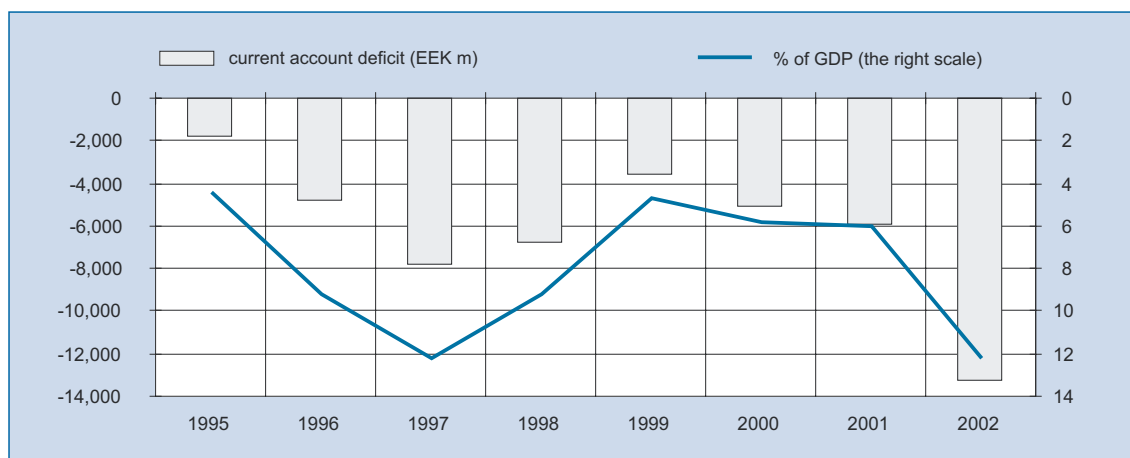

Figure 2.1. Balance of current account

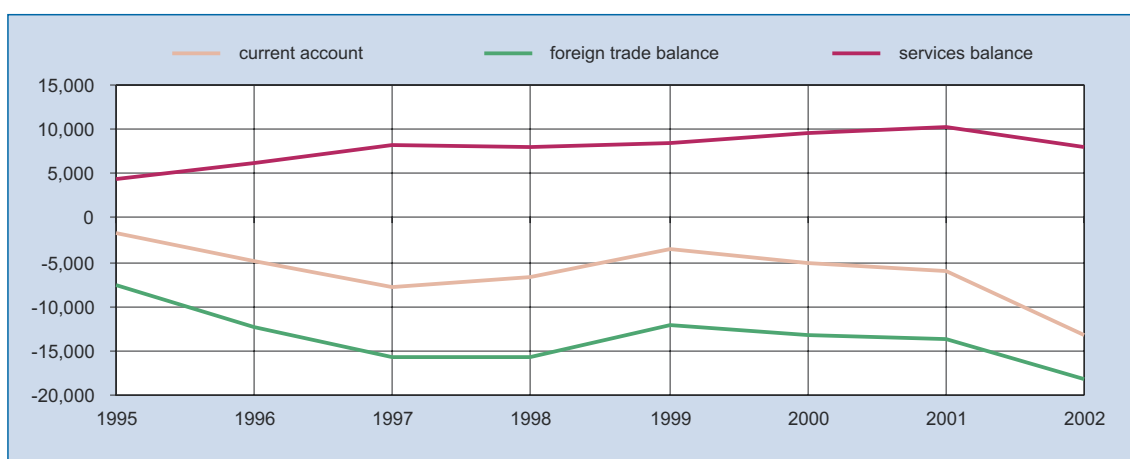

Figure 2.2. Comparison of the current account, foreign trade balance and services balance (in f.o.b prices, EEK m)

Goods

Under continuing global recession, Estonian export was unable to overcome the slump in 2002. Although the export of goods increased by 14% in the fourth quarter of 2002 as compared to the third quarter, the annual export slightly decreased year-on-year and amounted to 58 billion kroons (see Table 2.2). The import of goods continued to grow in the conditions of high domestic demand: import for free circulation grew by 9.7% in the fourth quarter and by 5.3% year-on-year, amounting to 76 billion kroons. Foreign trade deficit increased by 4.4 billion kroons year-on-year and reached the record level of 18.2 billion kroons.

Export under the **special trade statistics**⁵ was 56.9 billion kroons, import in c.i.f. prices was 79.5 billion kroons and trade deficit 22.6 billion kroons (see Figure 2.3).

Decrease of the **goods export** by 1.7% was caused by the nearly 20% decline in the export of processed goods, which cut their share in special export by 7 percentage points, to 18 billion kroons (see Table 2.3).

⁵ The analysis below does not contain the adjustment made in the foreign trade balance of the balance of payments by the Balance of Payments and Economic Statistics Department of Eesti Pank (repair of capital goods, provisions bought abroad, etc). Import is in c.i.f. prices and analysed by the trading country.

Eesti Pank uses the special trade system in its foreign trade analyses, which means that export does not contain the re-export of imported goods previously stored in customs warehouses or goods for provisioning sea vessels and aircraft. Import does not contain customs warehousing of imported goods, but reflects deliveries of goods from customs warehouses into free circulation and processing.

Table 2.2. Changes in the special export and import of goods

	Special exports			Special imports			Balance (EEK m)
	Volume ¹ (EEK m)	Change compared to the previous year (%)	Share in total export of goods and services (%)	Volume ¹ (EEK m)	Change compared to the previous year (%)	Share in total import of goods and services (%)	
1995	19,428.2	22.7	66.0	27,043.7	32.3	82.6	-7,615.5
1996	21,833.4	12.4	62.1	34,121.6	26.2	82.8	-12,288.2
1997	31,846.5	45.9	63.4	47,499.3	39.2	82.4	-15,652.8
1998	37,786.3	18.7	64.5	53,511.8	12.7	80.8	-15,725.5

¹ Data of the balance of payments' foreign trade sub-balance.

**Figure 2.3. Foreign trade balance (EEK m)**

Although the fourth quarter of 2002 indicated improvement of the subcontracting industry, the export of processed goods remained weak in the first three quarters of the year. The export of Estonian-assembled mobile communication equipment (capital goods) fell particularly sharply (almost by half), remaining, nevertheless, the biggest article in this group of goods. The export of capital goods also included transformers and electrical and alarm equipment. The bulk of goods of intermediate consumption was made up of mobile communication equipment parts and cables. Consumer goods processed in Estonia came from the category of textile industry products.

Table 2.3. Special export by end consumption

	Volume (EEK m)		Share (%)		Change (%)
	2001	2002	2001	2002	2002/2001
Normal export:	35,606.6	38,966.1	61.5	68.5	9.4
Capital goods	1,925.9	2,116.2	3.3	3.7	9.9
Goods of intermediate consumption	21,920.1	23,830.2	37.9	41.9	8.7
Consumer goods	11,124.1	12,032.6	19.2	21.2	8.2
Other	636.5	987.1	1.1	1.7	55.1
Export of processed goods:	22,249.9	17,897.0	38.5	31.5	-19.6
Capital goods	8,843.5	4,658.2	15.3	8.2	-47.3
Goods of intermediate consumption	9,674.9	9,196.1	16.7	16.2	-4.9
Consumer goods	3,730.3	3,873.8	6.4	6.8	3.8
Other	1.2	168.9	0.0	0.3	13,746.9
Total	57,856.5	56,863.1	100.0	100.0	-1.7

Normal export⁶ increased by more than 9% year-on-year and amounted to 39 billion kroons. Biggest export articles belonged to the group of goods of intermediate consumption: unprocessed and little processed timber, wooden construction components and prefabricated buildings, car accessories (seatbelts) and metal structures. The export of consumer goods included furniture and furniture accessories, fish and dairy products, pharmaceuticals and garments. The export of capital goods covered trailers, tractors, lab equipment and various mechanisms.

Import of goods increased by nearly 6% in 2002 (see Table 2.4), although the import of processed goods fell by 16%. Deliveries of mobile communication equipment parts, which belong to the group of intermediate consumption goods, fell by more than four times year-on-year and led to the decrease of mobile phones export as well. However, the import of various parts of electrical appliances increased considerably, accounting for 35% of intermediate consumption goods. Among capital goods, mostly goods under the category of machinery and equipment were imported: alarm equipment and other electrical appliances, mobile phones, condensers, microphones. The bulk of imported consumer goods was made up of clothing and chemical products.

Table 2.4. Special import by end consumption

	Volume (EEK m)		Share (%)		Change (%)
	2001	2002	2001	2002	2002/2001
Import for free circulation (normal import):	56,279.2	63,580.7	75.0	80.0	13.0
Capital goods	9,801.9	11,136.1	13.1	14.0	13.6
Goods of intermediate consumption	25,278.0	29,535.8	33.7	37.2	16.8

Other	6,438.3	7,236.4	8.6	9.1	12.4
Import of processed goods:	18,797.1	15,886.3	25.0	20.0	-15.5
Capital goods	3,046.9	3,571.0	4.1	4.5	17.2
Goods of intermediate consumption	14,592.5	11,176.5	19.4	14.1	-23.4
Consumer goods	1,154.5	1,082.5	1.5	1.4	-6.2
Other	3.2	56.3	0.0	0.1	1,641.7
Total	75,076.3	79,467.0	100.0	100.0	5.8

The year-on-year increase of import was caused by the 13% increase in **normal import** (import for free circulation), which grew across all groups of end consumption. Import of goods of intermediate consumption increased the most and constituted the biggest share: parts of motor vehicles and various machinery, natural gas, metal products and iron structures, plastic products, cables, raw wood and wooden sleepers, cotton, etc. Imported capital goods included mostly transport vehicles (commercial vehicles, tractors, railway engines, carriages, trailers) and machinery and equipment (computers, roadworks' machinery, machine-tools, mobile phones). Main articles among consumer goods were pharmaceuticals, furniture, food products, textile products and chemical products. Under the so-called other goods passenger cars were imported (up 25% year-on-year), as well as fuel.

The **foreign trade deficit** increased by 31% year-on-year and reached 22.6 billion kroons (see Table 2.5). The surplus of processed goods fell by 1.5 billion kroons, while the negative balance of normal export and import increased by 4 billion kroons, mostly due to the growing import of capital goods and goods of intermediate consumption.

Across the groups of countries, export of goods to the European Union decreased by 4%, but increased to the Central and Eastern European countries and the CIS countries (see Table 2.6). Nevertheless, export to the EU countries accounted for 68% of the total export and even 82% if we include accession countries.

⁶ Normal export – export of goods manufactured in Estonia and belonging to Estonian legal entities; does not include the export of goods brought to Estonia for processing. Normal import – import of goods into Estonia for internal consumption; does not include import of goods for processing.

Table 2.5. Foreign trade balance by end consumption

	2001	2002

Total	57,856.5	56,863.1	100.0	100.0	-1.7

Finland, Sweden and Germany were still Estonia's top three export partners, accounting for 74% of the export to the EU and half of the total export. Export to Finland decreased by 28% year-on-year (mostly due to the drop in processing of mobile communication equipment), but export to Sweden was up by 7% and to Germany even by 40%. Latvia and Lithuania dominated among the Central and Eastern European countries, with export to these two neighbouring countries growing by 6% and 15%, respectively. Among the CIS countries, the leading position belonged to Russia (up 21%) and the Ukraine (down 6%). Major partners among other countries included Norway and the USA with a 20% growth in exports. 1.3 billion kroons worth of goods was placed into free trade zones to wait for export.

Import of goods across all groups of countries increased in 2002, with the exception of import from the CIS countries, which remained unchanged against 2001 (see Table 2.7). The top three partners in the EU were again Finland, Germany and Sweden, and the growth trend was similar to that of export: import from Finland decreased by 18%, import from Germany and Sweden increased by 14% and 11%, respectively. Among the Central and Eastern European countries, import from Latvia increased by 7% and from Lithuania by 33%. Estonia's trade balance with Latvia had a surplus of nearly 1 billion kroons, while trade with Lithuania showed a deficit of almost the same size. Leaders among the CIS countries were Russia, the Ukraine and Belarus. Major import partners among other countries included Japan, Hong Kong, China and the USA.

The **foreign trade balance** was negative for all groups of countries (see Table 2.8).

Table 2.7. Special import by groups of countries

Services

The surplus of the **services balance** amounted to 8.1 billion kroons in 2002, down 20% year-on-year (see Figure 2.4 and Table 2.9). While in previous years the surplus of the services balance compensated for 50–75% of the foreign trade deficit, then in 2002 the surplus of the services balance covered only 44% of the foreign trade deficit.

Figure 2.4. Services balance (EEK m)

Table 2.9. Services export and import

	Export		Import		Balance	
	Volume (EEK m)	Change compared to the previous year (%)	Volume (EEK m)	Change compared to the previous year (%)	Volume (EEK m)	Change compared to the previous year (%)
1993	4,434.3	81.7	3,437.2	78.2	997.1	95.0
1994	6,657.0	50.1	5,301.3	54.2	1,355.7	36.0

1996	13,352.8	33.2	7,107.8	24.9	6,245.0	44.2
1997	18,366.7	37.5	10,134.0	42.6	8,232.7	31.8
1998	20,804.0	13.3	12,754.8	25.9	8,049.2	-2.2
1999	21,951.9	5.5	13,610.4	6.7	8,341.5	3.6
2000	25,485.8	16.1	15,911.2	16.9	9,574.6	14.8
2001	28,866.5	13.3	18,706.3	17.6	10,160.2	6.1
2002	32,830.9	13.7	24,736.9	32.2	8,094.0	-20.3

The main change in the structure of the services balance in 2002 concerned the 0.9 billion kroons deficit of construction services, which replaced the 0.8 billion kroons surplus of 2001 (see Table 2.10). Balances of other major categories of services changed little, yet surpluses decreased and the share of deficits in the balance of payments increased.

Table 2.10. Balance of services by major categories

	Balance (EEK m)		Share (%)	
	2001	2002	2001	2002
Transport services	5,328.6	5,183.0	52.4	64.0

Construction services	822.1	-917.8	8.1	-11.3
Business services	-128.3	-146.0	-1.3	-1.8
Government services	-1,469.9	-1,418.7	-14.5	-17.5
Other	63.0	52.8	0.6	0.7
Services: net	10,160.2	8,094.0	100.0	100.0

Similarly to 2001, **export of services** increased by 14% in 2002 (see Table 2.11). The only category that indicated above-average growth of export was transport, the most important of services, which increased by 29%. Export of construction, business and government services has decreased year-on-year.

Import of services increased by 32% in 2002, import of construction services increased four times and import of transport services was up 48% (see Table 2.12).

Table 2.11. Export of services by major categories

In 2002, export and import of **transport services** increased faster than the total export and import of services (see Figure 2.5), with the volume of cargo transport growing at a particularly rapid rate (export was up 58% and import 59%). The export of cargo transport by rail increased 5.8 times, import climbed 3.7 times. Road transport, however, has decreased.

Figure 2.5. Transport services balance (EEK m)

The growth of **travel services** export was very small in 2002 (3%). The number of foreign tourists visiting Estonia decreased by 1%, whereas the length of visits increased by 9% (see Figure 2.6). The cross section of tourists has changed – fewer visitors came from Finland, the CIS countries and the USA while the number of visitors from Scandinavia and the EU increased. Given the numerous discounts related to the 2002 slump in the tourism industry and increasing purchasing power of Estonian residents, the import of travel services increased by 14%. Discount offers by airlines took more Estonians to far-away destinations that involved higher expenses. The number of visits to such far-away countries that have never been in the statistics of travel destinations on their own before, increased at a particularly rapid rate. The most popular destinations besides the neighbouring countries included Spain, Italy, Great Britain and the USA.

Figure 2.6. Travel services balance (EEK m)

Income

The **deficit of the income balance** was 5.5 billion kroons in 2002, up 11% year-on-year (see Table 2.13 and Figure 2.7). The bulk of the increase resulted from the net outflow of direct investment income, which grew by 15%. The growth of income outflow was slowed down by the decrease in the outflow of other investment income (loan and deposit interests, etc) and increase in the net inflow of employee compensation income.

Inflow of income to Estonia increased by 0.3 billion kroons in 2002 (10%). Inflow of income from direct investments made into foreign countries increased by 84%, making up 26% of the total inflow of income (see Table 2.14). Income from compensations paid to Estonians working abroad increased rapidly as well (75%).

Total	2,994.7	3,279.3	100.0	100.0	9.5

Outflow of income from Estonia increased by 11% and amounted to 8.8 billion kroons (see Table 2.15). The only category that saw the growth of outflow of income was direct investments made into Estonia (21%). In 2002, dividend and undistributed profit payments to non-residents increased 2.3 times year-on-year, supposedly resulting from the amendment of the Income Tax Act concerning taxation of dividends.

Table 2.15. Income outflow from Estonia

Transfers

The surplus of the transfer balance stood at 2.4 billion kroons in 2002, decreasing by 0.3 billion kroons year-on-year. The bulk of transfers were government transfers to get ready for the EU accession. The surplus of the government transfers decreased due to the debit growth. The debit and credit of private transfers have increased considerably over the year (by 24% and 79%, respectively), but the surplus decreased only by 145 million kroons year-on-year.

CAPITAL AND FINANCIAL ACCOUNT

The surplus of the capital and financial account reached the record level with 13.6 billion kroons, standing at almost 2.8 times higher than in 2001. There were changes in the financing structure of the current account deficit in 2002. While in previous years it was mostly covered by direct investments, then in 2002 the share of direct investments decreased and the share of portfolio and other investments increased. A survey of the financial account is given in Figures 2.8 and 2.9.

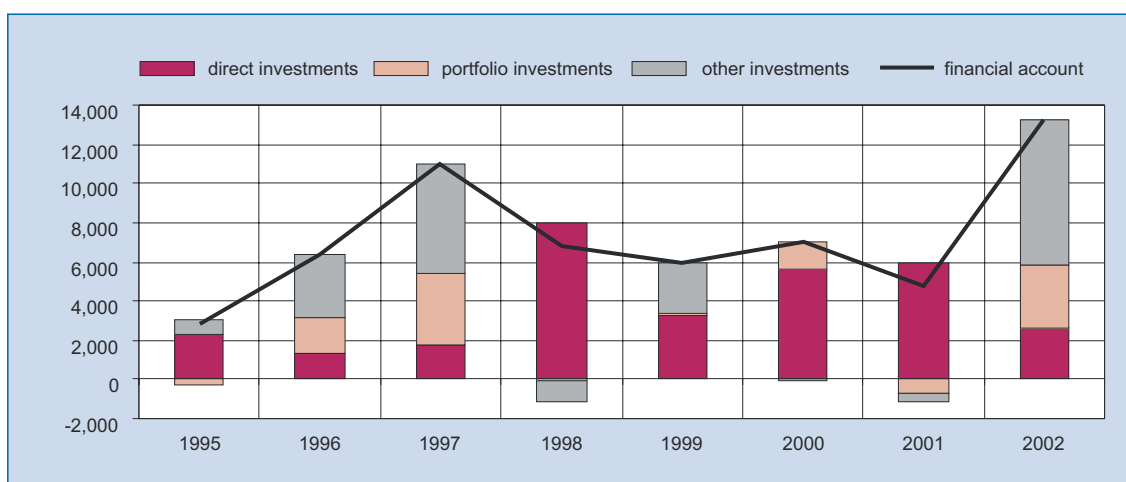

Figure 2.8. Changes in the structure of foreign investment capital flows (EEK m)

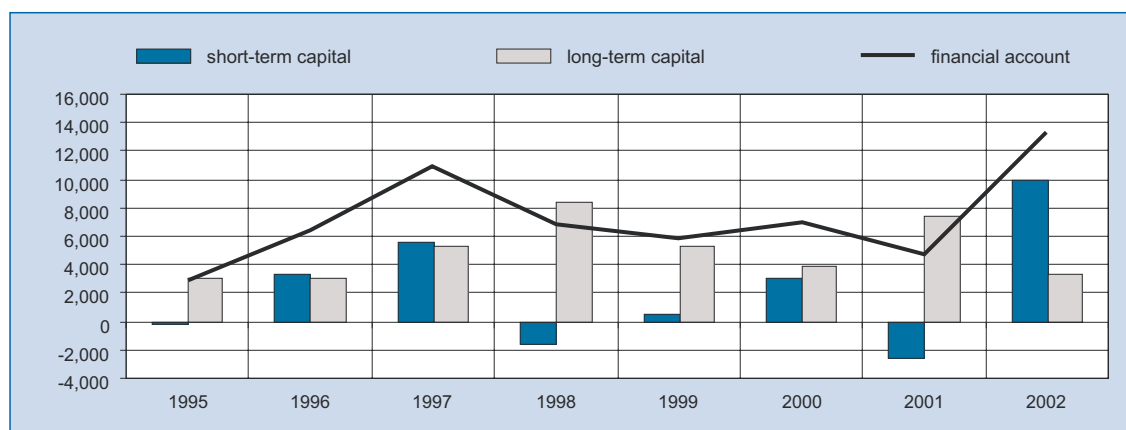

Figure 2.9. The maturity structure of financial sources (EEK m)

Direct Investments

The **balance of direct investments** had a surplus of 2.6 billion kroons in 2002, amounting to 44% of the net inflow of direct investments in 2001. Non-residents invested 4.8 billion kroons into Estonia and Estonian residents' direct investments in foreign countries increased by 2.2 billion kroons (see Table 2.16 and Figure 2.10). One fifth of the current account deficit was covered by the net inflow of direct investments.

The **inflow of direct investments into Estonia** fell by more than a half year-on-year. However, we have to keep in mind that the year 2001 was a record one as far as inflow of direct investments was concerned. In 2002, non-residents invested almost 90% of long-term financial investments into equity capital, of which 70% consisted of undistributed profits belonging to non-residents. At the same time, an extensive withdrawal of owner's earnings took place, testifying to Estonia's favourable investment climate. Dividend payments were affected also by the expected amendment of the Income Tax Act concerning taxation of dividends (took effect in 2003). Income was mostly reinvested to the manufacturing, while transport, storage and communication firms preferred dividend payments. Compared to equity capital investments, transfers of loan capital were small, because short-term loans were repaid and new long-term loan liabilities were taken in approximately the same amount (see Figure 2.11).

Table 2.16. Structure of direct investments

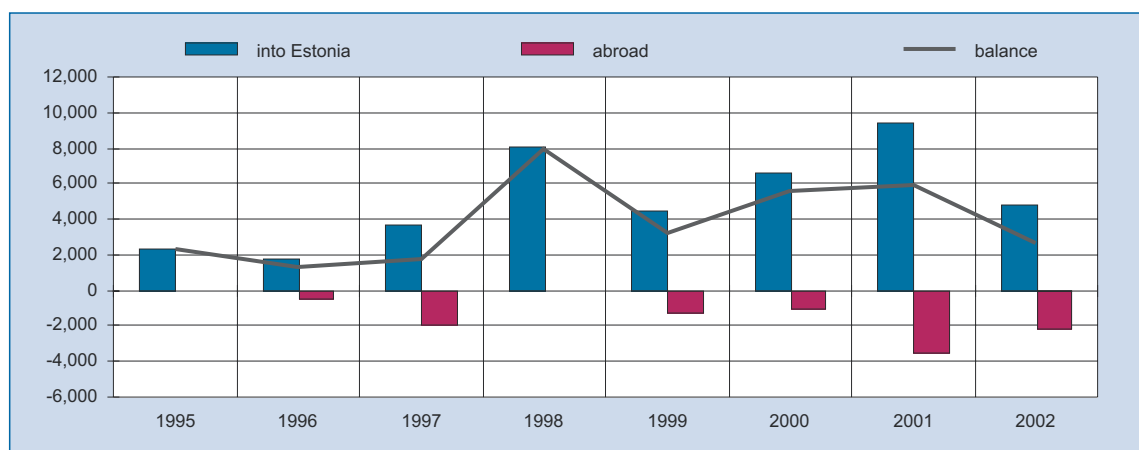

Figure 2.10. Direct investments (EEK m)

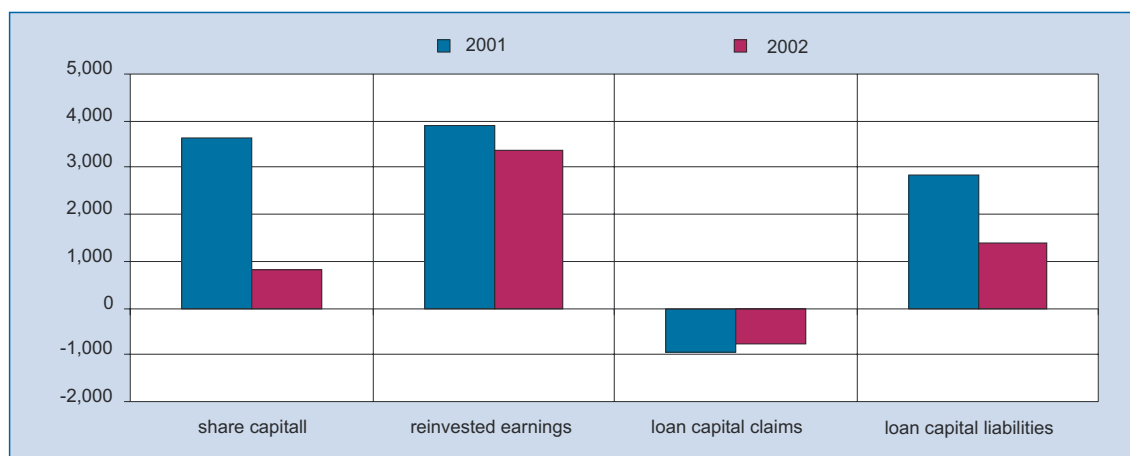

Figure 2.11. Structure of direct investments made into Estonia (EEK m)

82% of direct investment inflow came from Finland and Sweden; in case of Dutch investments a considerable flow-back occurred (see Figure 2.12). 85% of the net inflow of direct investments originated from the EU member countries and 44% from the Monetary Union. The share of investments from countries invited to join the EU in 2004 amounted to just 2%. Finance and wholesale and retail trade were the most preferred sectors, whereas direct investments into electric energy, gas and water supply companies decreased considerably (see Figure 2.13).

Direct investments abroad by Estonian businesses dropped by one third year-on-year. Three fourths of the outflow of direct investments increased the equity capital of companies abroad with Estonia's majority holding. The value of investments calculated under the equity method (reinvested earnings) increased by 30%. Similarly to direct investments made into Estonia, an extensive return of short-term loan capital took place in the fourth quarter (0.6 billion kroons) and the positions of long-term loan capital in foreign countries increased by almost 1 billion kroons (see Figure 2.14).

In 2002, the most preferred investment target was still Lithuania (44% of the total outflow). While previously the second place belonged to affiliated/associated companies in Latvia, then in the given period Cyprus occupied this place (see Figure 2.15). A change of places has also occurred in spheres of activity – investments

Figure 2.12. Structure of direct investments made into Estonia by countries in 2002 (EEK m)

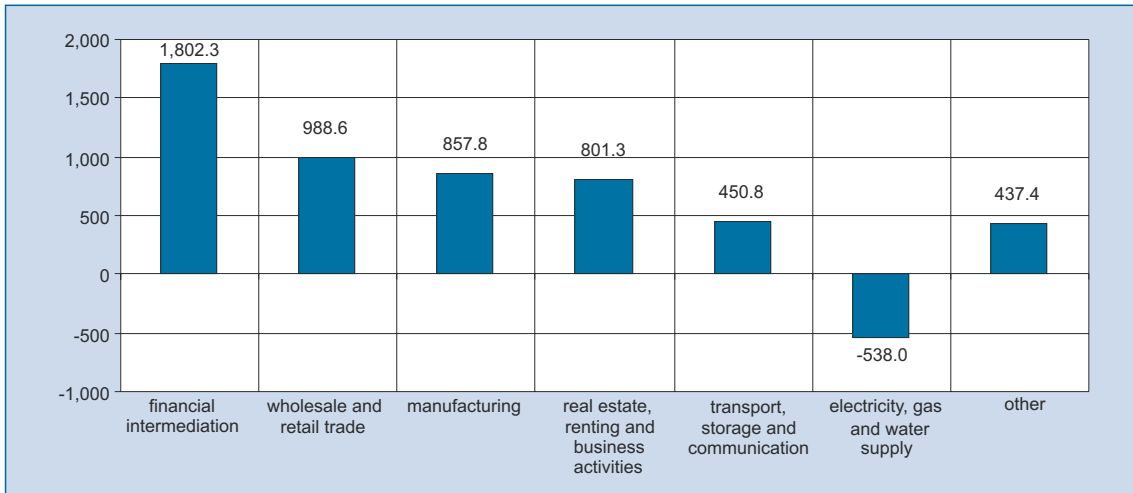

Figure 2.13. Structure of direct investments made into Estonia by spheres of activity in 2002 (EEK m)

Figure 2.14. Structure of direct investments made abroad (EEK m)

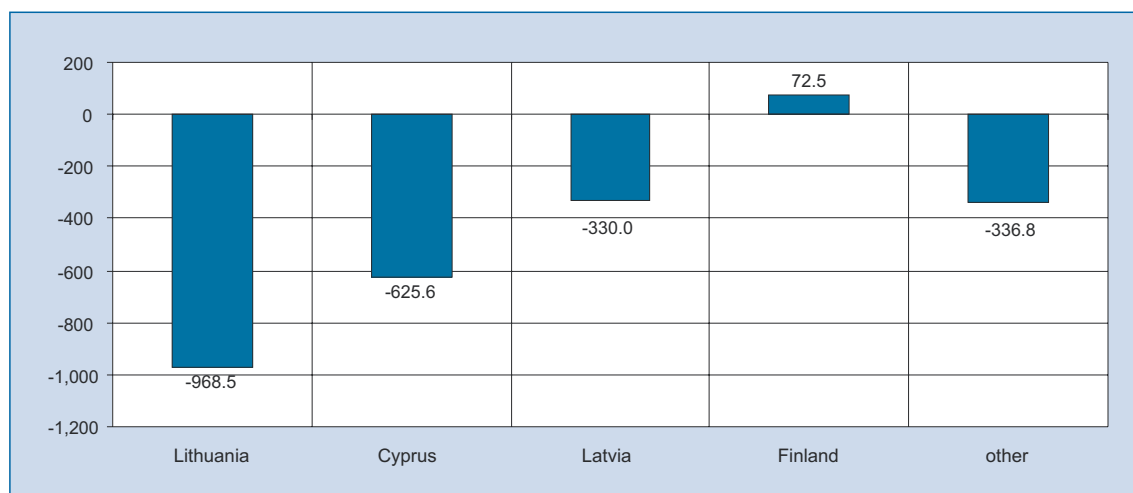

Figure 2.15. Structure of direct investments made abroad by countries in 2002 (EEK m)

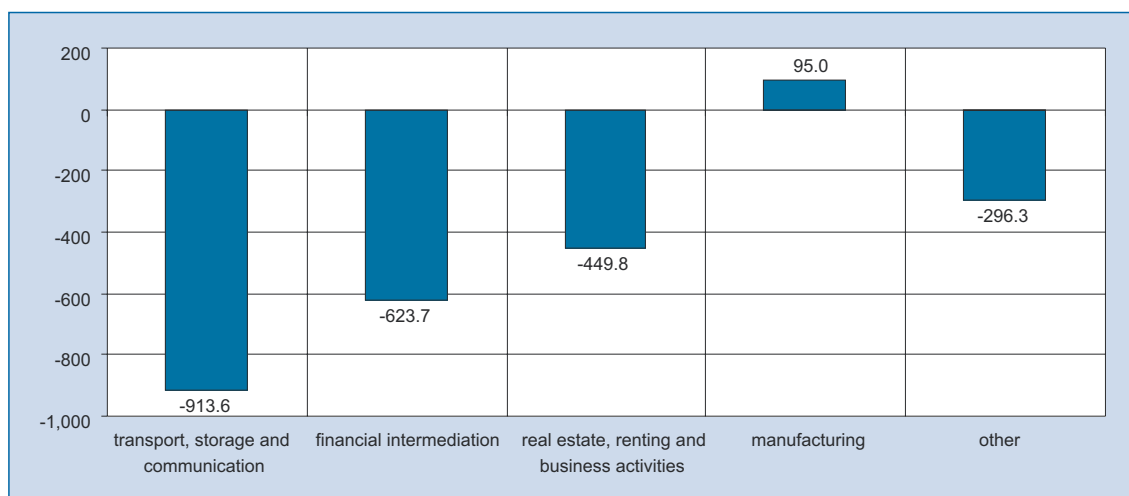

Figure 2.16. Structure of direct investments made abroad by spheres of activity in 2002 (EEK m)

into transport, storage and communication have risen to the top and the former leader financial intermediation has dropped to the second place (see Figure 2.16). The share of direct investments placed into EU member countries was 2%, whereas 88% of direct investments were made into countries joining the EU in 2004.

Portfolio Investments

The **net inflow of portfolio investments** amounted to 3.2 billion kroons in 2002, surpassing the figure of 2001 more than four times (see Figure 2.17 and Table 2.17). This form of investment inflow was an important source of finance for the Estonian economy in 2002 and can be compared in size to direct investments.

Portfolio investments abroad increased by 2.4 billion kroons last year, resulting mostly from free resources of government sector being invested into debt instruments issued by non-residents. No major changes took place in investments into equity securities.

Portfolio investments into Estonia increased by 5.6 billion kroons year-on-year, with approximately 1 billion kroons invested into equity securities and 4.6 billion kroons into debt securities. 0.1 billion kroons worth of investments into equity securities were made into credit institutions and 0.8 billion kroons worth into companies of the other sector. Successful bond issues of the government sector and the other sector attracted, respectively, 3.0 billion and 1.5 billion kroons of additional capital to Estonia.

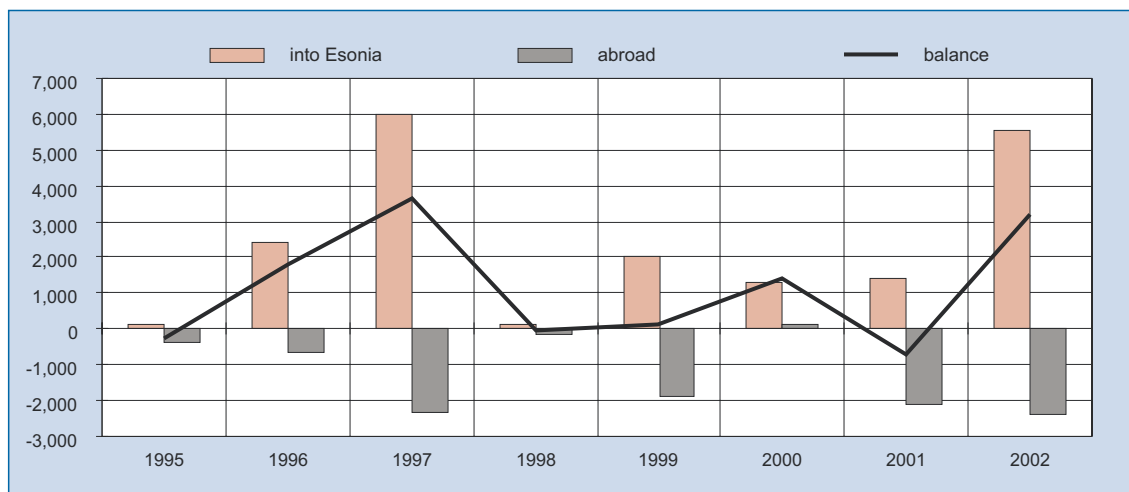

Figure 2.17. Portfolio investments (EEK m)

other sectors	-376.4	152.9	404.7	3,011.4	28.3	3,164.3

Other Investments

The **balance of other investments** showed a surplus of approximately 7.5 billion kroons in 2002 (see Figure 2.18 and Table 2.18), differing considerably from the year 2001 when a capital outflow of 0.4 billion kroons took place. The 2002 capital inflow of 7.5 billion kroons can be attributed to the remarkable increase of liabilities in the form of growing loan liabilities and larger deposits of non-residents in domestic credit institutions. The inflow of investments mostly took the form of short-term capital (see Table 2.19).

Other investments abroad increased by 0.7 billion kroons year-on-year. The biggest changes concerned loans granted by the other sector, which resulted in the outflow of capital worth 1.4 billion kroons, and the decrease of trade credit claims, which caused the inflow of capital worth 1 billion kroons. Other claims decreased by 0.2 billion kroons year-on-year.

**Figure 2.18. Other investments (EEK m)****Table 2.18. Other investments by type of capital (EEK m)**

central bank	-202.7	-53.3	-89.2	646.1	-291.9	592.8
government sector	637.6	-324.6			637.6	-324.6
credit institutions	-3,574.7	-345.3	908.2	4,045.4	-2,666.5	3,700.1
other sectors	-254.2	2,529.8	654.8	212.8	400.6	2,742.6

Other investments into Estonia increased by 6.7 billion kroons in 2002. In order to meet higher domestic demand, credit institutions have increased their loan liabilities to non-residents by 2 billion kroons; loan liabilities of the other sector grew by 0.5 billion kroons. Deposits of non-residents in Estonian credit institutions have increased by 3.8 billion kroons, which has also contributed to the growth of liabilities. Only the government sector has reduced its loan liabilities – by 0.9 billion kroons.

RESERVES

Reserves of the balance of payments increased by 927 billion kroons in 2002. Coverage of imports with the reserves is illustrated in Figure 2.19.

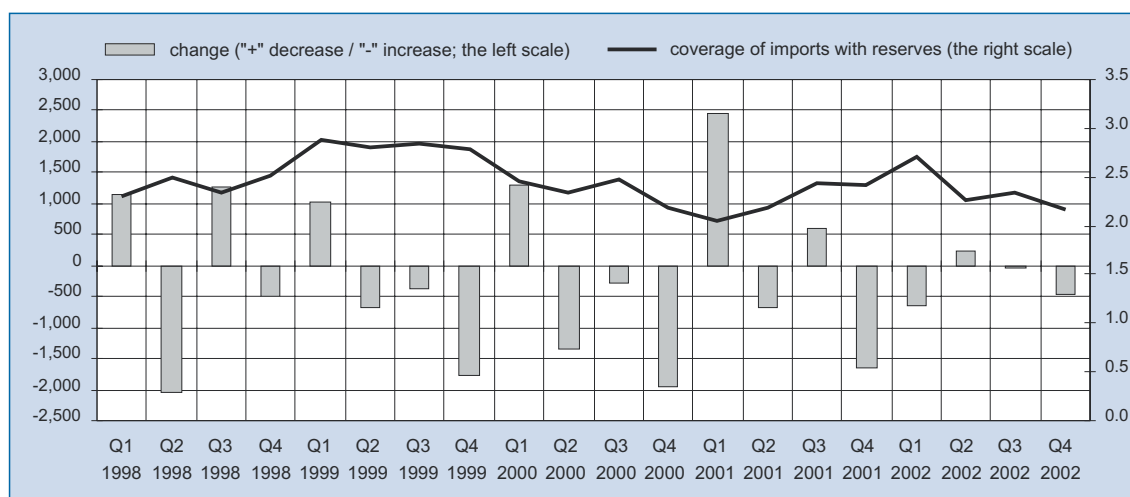

Figure 2.19. Change of Estonian gold and foreign currency reserves (EEK m) and the coverage of imports with reserves (by quarters)

III. ESTONIA'S INTERNATIONAL INVESTMENT POSITION AND EXTERNAL DEBT AS OF 31 DECEMBER 2002

By the end of 2002 the volume of all foreign investments made into Estonia totalled 127 billion kroons (118% of the GDP), which is almost 6% more than a year before. Half of it or 63 billion kroons were direct investments, which do not contribute to the external debt (see Table 3.1). The bulk of foreign investments have been made into finance (28% of direct investments), transport, storage and communication (21%) and manufacturing (19%). Nearly 70% of direct investments came from Sweden (41%) and Finland (27%, see Table 3.2). The USA held the third place with 7%.

Besides direct investments, considerable amount of capital has come into Estonia in the form of other investments (loans, deposits, etc – 34%) and portfolio investments (16%). The last quarter of the year saw particularly intensive inflow of capital in the form of other investments.

Estonian investments into foreign countries amounted to 61 billion kroons by the end of the year 2002. The majority of it was made up of loans, deposits (38%) and the gold and foreign currency reserves of the central bank (25%). The share of direct investments in the total volume of investments abroad amounted to 17%. Preference was given to such areas as finance (39% of total direct investments abroad) and transport, storage and communication (21%), as well as real estate, leasing and business services (19%; see Table 3.3). Three fourths of Estonian foreign investments have been made into the Baltic countries – Lithuania (44%) and Latvia (31%).

Due to the dominance of external liabilities, Estonia's net investment position was negative by 65.9 billion kroons at the end of 2002 (61% of the GDP).

On 31 December 2002, Estonia's gross external debt amounted to 70.3 billion kroons (65% of the GDP; see Table 3.4) and net external debt (debt-related external claims minus liabilities) increased 1.8 times year-on-year and amounted to 12.8 billion kroons (12% of the GDP). The growth in net external debt was due to credit institutions, whose net external debt increased more than 70%. The net external debt of the government sector has been positive two years running (3 billion kroons). The dynamics of Estonia's gross and net external debt can be seen in Figures 3.1 – 3.3.

IV. INTERNATIONAL TRANSACTIONS OF CUSTOMERS VIA THE ESTONIAN BANKING SYSTEM

Number and Turnover of Transactions

In 2002, the **total number** of international payments⁷ increased by 11% year-on-year (see Table 4.1 and Figure 4.1), both in case of incoming and outgoing payments. The number of incoming payments exceeded the number of outgoing payments by 83,000. A large proportion of payments, approximately 77%, was smaller than 100,000 Estonian kroons.

The **turnover** of international payments had a similar dynamics: year-on-year, the turnover of incoming payments increased by 10% and the turnover of outgoing payments was up 17% (see Table 4.2 and Figure 4.2). The turnover of payments increased at the end of the year.

Table 4.1. Number of international payment transactions

	In thousands		Change (%)
	2001	2002	2002/2001
Incoming payments	547	599	9
Outgoing payments	458	516	13
Total	1,005	1,115	11

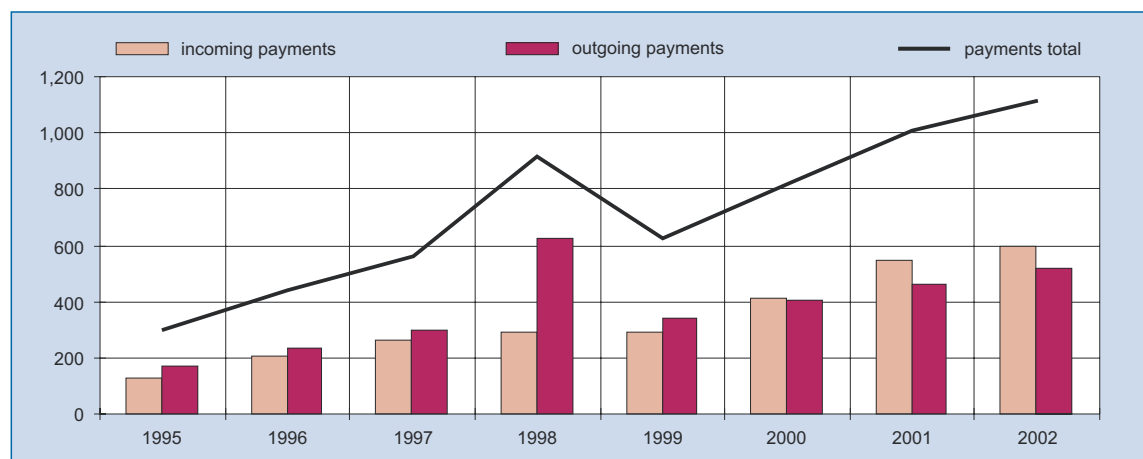

Figure 4.1. Number of international payment transactions (in thousands)

⁷ International payments do not contain transactions between residents only and between non-residents only.

The share of payments under 100,000 kroons accounted for only 10% of the total turnover. The average size of an incoming payment (158,700 kroons) remained on the level of 2001. The average size of an outgoing payment (203,300 kroons) increased by approximately 7,000 kroons year-on-year.

Table 4.2. Turnover of international payment transactions

	EEK billion		Change (%)
	2001	2002	2002/2001
Incoming payments	87	95	10
Outgoing payments	90	105	17
Total	177	200	13

Figure 4.2. Turnover and balance of international payment transactions (EEK billion)

Use of Currencies⁸

By turnover, the ranking of major currencies used in international payments by Estonian credit institutions in 2002 changed due to the introduction of the euro banknotes and coins on 1 January 2002, as was expected (see Figure 4.3). With the disappearance of the German mark and the Finnish markka, their position was

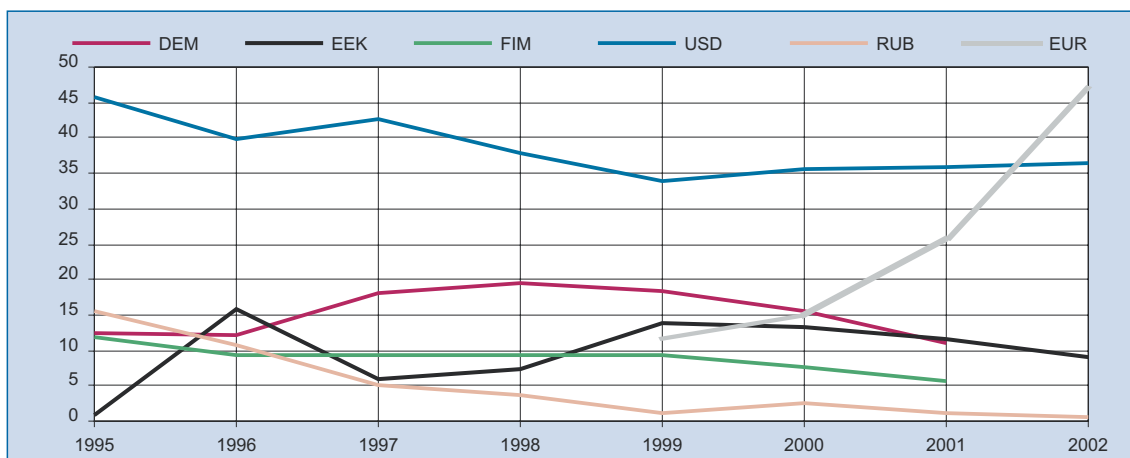

Figure 4.3. Currencies used in international payment transactions (%)

⁸ The analysis of transactions by currencies does not reflect payments below 100,000 kroons as these are given only in the Estonian kroons in the statistics of Eesti Pank and their inclusion would thus considerably distort the general picture.

taken by the euro, which almost doubled its share year-on-year to 47% of the total turnover. The share of the US dollar remained unchanged. The share of the Estonian kroon decreased somewhat (-2 percentage points) in turnover and placed third with 9% among the currencies used. Similarly to 2001, the share of other currencies in total turnover was just 8%, with the Swedish krona and the Russian rouble accounting for 3% and 1%, respectively.

In the ranking of currencies **by the number of transactions**, the use of the euro dominated as well, more than doubling year-on-year and making up 52% of the total number of transactions. The number of transactions in other currencies remained unchanged against 2001.

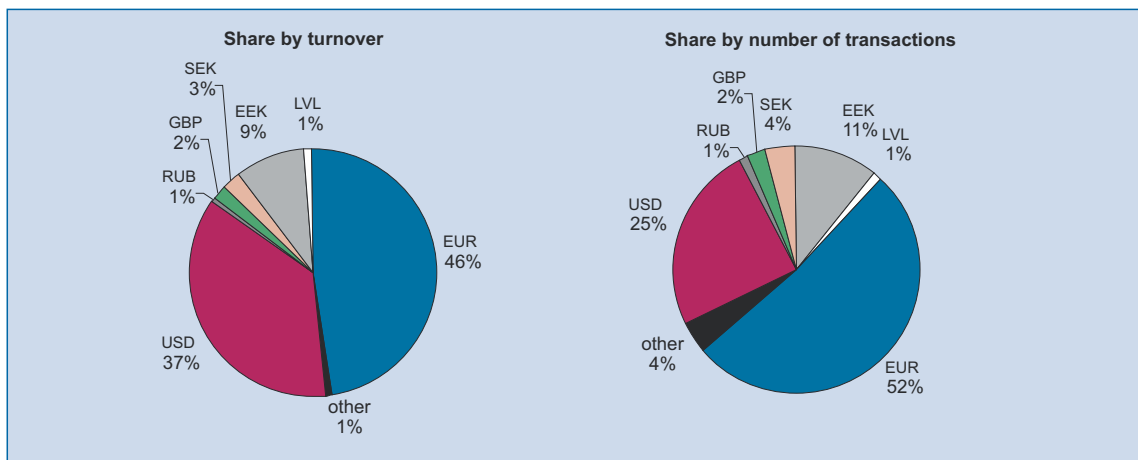

Figure 4.4. Use of major currencies by turnover and number of international payments in 2002 (%)

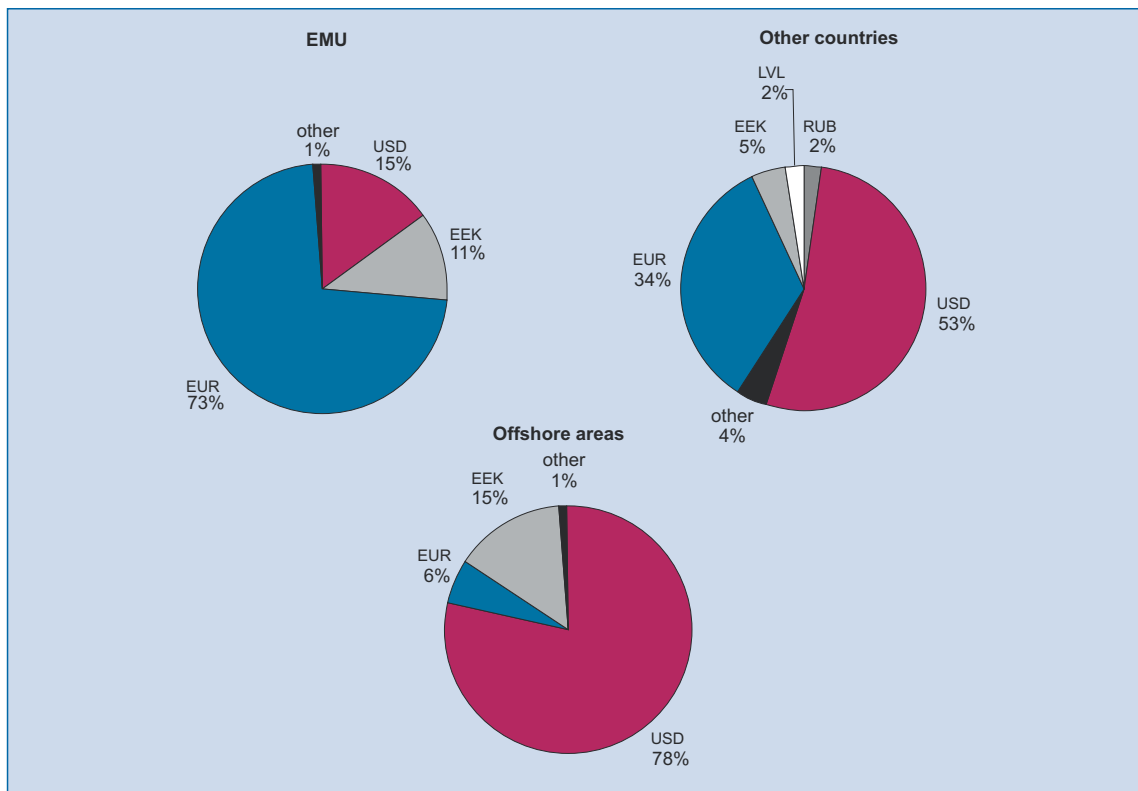

Figure 4.5. Currencies used in international payment transactions by countries in 2002 (by turnover)

By countries, the use of currencies in international payments varied (see Figures 4.4 and 4.5). The euro dominated in payments with the **European Monetary Union (EMU) countries** (81% of the number of transactions and 73% of the turnover). By the number of transactions, the Estonian kroon moved to the second place (10%). By turnover, the share of the Estonian kroon was 4 percentage points smaller than that of the US dollar (8% of the number of transactions and 15% of the turnover). The share of the euro in total turnover more than doubled in 2002. The share of the Estonian kroon and the US dollar remained unchanged year-on-year. The share of other currencies amounted to just 1% in the euro area.

In transactions with offshore areas mostly two currencies were used – the US dollar (47% of the number and 79% of the turnover of transactions) and the Estonian kroon (47% and 15%, respectively). Year-on-year, the use of the euro increased, whereas the use of the US dollar somewhat decreased. The share of the Russian rouble remained below 1%.

In transactions **with other countries**, the dominating currency was the US dollar (44% of the number and 53% of the turnover of transactions), followed by the euro (37% and 34%, respectively) and the Estonian kroon (8% and 5%, respectively). Year-on-year, the share of the euro increased the most, both in the number of transactions and turnover (+21 percentage points and +16 percentage points, respectively).
